PROFESSIONAL SUMMARY

Recent Data Science Engineering graduate with a strong technical foundation in Python programming, SQL databases, and backend web frameworks. Hands-on experience developing, testing, and optimizing scalable backend applications using Django and Flask. Proven track record in automating data preprocessing pipelines, database management, and building RESTful APIs. Analytical problem solver looking to contribute and grow as a Junior Python Developer.

TECHNICAL SKILLS

Languages: Python, SQL

Frameworks: Django, Flask, REST APIs

Databases: MySQL, SQLite

Tools: Git, GitHub, VS Code, Jupyter Notebook

Core Knowledge: Object-Oriented Programming (OOP), Software Development Life Cycle (SDLC), Database Design & Normalization, Backend Application Architecture

EDUCATION

Sri Siddhartha Institute of Technology

Expected June 2026

Bachelor of Engineering - Data Science

PROFESSIONAL EXPERIENCE

LLM Intern

Feb 2026 - May 2026

Ethara AI

- Engineered custom Python scripts to parse, automate, and process routine analytical data pipelines, reducing execution times.
- Designed program logic to programmatically validate output integrity against structured system behavior guidelines.
- Assisted backend engineering efforts by testing prompt formatting structures and running comprehensive boundary evaluations.
- Conducted targeted software data validation and code checks to uncover syntax irregularities or processing blocks.
- Collaborated dynamically with senior development teams to optimize scripts and refactor workflow routines for overall system reliability.

ACADEMIC PROJECTS

Campus Complaint Resolution System

Python | Django | MySQL

- Developed a full-stack web application architected with modular student routing and specialized administrator command portals.
- Built complex functional flows handling record registration, dynamic tracking states, and live update management blocks.
- Designed and optimized relational MySQL database tables to manage scalable, high-integrity case storage rules.

Cyber Hacking Breach Prediction

Python | Flask | Scikit-learn

- Engineered an end-to-end predictive machine learning web architecture serving calculations over a lightweight Flask server.
- Implemented clean pipeline modules processing data token clearing, feature selection, and model training metrics.
- Validated classification performance benchmarks, achieving an optimal 87.6% computation accuracy threshold.

Finance Backend API

Python | REST API | SQLite

- Developed modular RESTful backend interfaces configured to securely capture, route, and update sensitive operational files.
- Implemented baseline CRUD handlers backed by explicit input validations and embedded SQLite relational logic.

CERTIFICATIONS & ACHIEVEMENTS

- National Level Project Exhibition:** Successfully showcased functional project source code architectures at Technodea 2026.
- Certifications:** Full Stack Development & Machine Learning (ExcelR) | GenAI-Powered Data Analytics Job Simulation (Forage)
